#### Clark Circle Cottage No. 4 - Springfield

National Register Nomination form for CARR-1643.

The original 1924 portions of the Clark Circle complex consisted of a men's residence (Cottage 1), a women's residence (Cottage 2), the Dining Hall & Kitchen, and the Service Building. This cluster was the first work at Springfield Hospital by the architect Henry Powell Hopkins. Hopkins also designed the other buildings in the Clark Circle Complex - Cottages 3 and 4, which were added in 1928, and Cottage 5, which was built 1935-7 with funds from the Public Works Administration. All of the buildings are designed in a similar Colonial Revival style characterized by an often sparing, sometimes nearly Modern, use of historical features. All of the buildings except for Cottage 5 were built by the Northeastern Construction Company. Cottage 5 was built by the Davis Construction Company.

Like the older Martin Gross and Warfield complexes at Springfield Hospital Center, the Clark Circle complex is modeled on the "cottage plan" of hospital design. From the 1840s to the 1880s, most hospitals were built based on the "linear plan," a single large building with wings for housing and treating patients (Yanni, Carla. The Architecture of Madness; Insane Asylums in the United States. Minneapolis: University of Minnesota Press, 2007. pgs. 14,79). The contrasting, "cottage" or "colony" plan became popular around the turn of the century and consisted of clusters of smaller buildings. The cottage plan resulted from reformers who hoped to make institutions more humane and increasing hospital populations, because it allowed for the quick and incremental growth of facilities. The plan is generally associated with a group of medical professionals who believed that most mental illness was incurable and required long-term institutionalization (Yanni, 84).

While the colony plan had its roots in the late nineteenth century, the 1924 Clark Circle complex was up-to-date in its application of the form for housing and treating epileptic patients. The 1920 edition of the American Medical Association Handbook of Therapy noted that, "The necessity of epileptic colonies and public institutions for the study and care of epileptics is now being recognized, and they have been inaugurated by a number of states." (Osborne, Oliver T. and Morris Fishbein. Handbook of Therapy, Sixth Edition. Chicago: American Medical Association, 1920. pg. 438.). According to one source, Ohio had become the first state to establish a colony plan facility for epileptics in 1893 and that just 14 states had such facilities in 1919 (Warner, Amos Griswold and George Elliott Howard. American Charities. New York: Thomas Y. Crowell Company Publishers, 1919. pg. 339). In 1915, the only Maryland facility exclusively for epileptics was the small private Silver Cross Home in Port Deposit (State of New York Report of the State Commission to Investigation Provision for the Mentally Deficient. Albany: J.B. Lyon Company, 1915. pgs. 443-4). So, the founding of the state facility for epileptic patients at Springfield Hospital was a significant event in the history of public health in Maryland.

The 1920 AMA Handbook stressed the importance of controlling indoor and outdoor environment and patient diet in the treatment of epilepsy (Osborne, 438). For these reasons, a professionally staffed and purpose-built facility was seen as important in treating the condition. Another text of the time justified the establishment of institutional housing for epileptics as beneficial for a variety of medical and social reasons. It argued that because seizures made it difficult for epileptics to maintain jobs, they suffered disproportionally from poverty, social exclusion, and addiction (Jelliffe, Smith Ely and William A White. Diseases of the Nervous System; A Text-Book of Neurology and Psychiatry. Philadelphia and New York: Lea & Febiger, 1917. pgs. 804-5). The text went on the reason, "In the colony all these social handicaps are removed. Here he may have a fit in peace and comfort without feeling that he is disgraced or in imminent danger of losing his means of livelihood... he is provide a home, congenial

surrounds, a regulated diet, and is under that careful and continuous skilled supervision for a prolonged time which is so essential to the best results. Under colony care Spratling thinks 5 per cent of cases as they go can be cured and that this percentage could be doubled or perhaps trebled if all the cases could be gotten under treatment early" (Jelliffe, 805).

All seven buildings in the Clark Circle complex were designed by Henry Powell Hopkins. Hopkins was born in Annapolis, Maryland on February 12, 1891. According to the MIHP forms for CARR-1224 and CARR-1229, the Clark Circle Complex was Hopkins's first commission at Springfield Hospital. He went on to design a total of 16 new buildings at Springfield. Hopkins received a Bachelor of Architecture degree from Columbia University in 1914 and a M.A. from St. Johns College in 1918. He joined the American Institute of Architects in 1921 (Tatman, Sandra L. "Hopkins, Henry Powell (1891 - ?)" Philadelphia Architects and Buildings database: http://www.philadelphiabuildings.org. accessed Nov. 27, 2007). During the 1920s, Hopkins worked from an office at 347 N. Charles Street in Baltimore. From the early 1940s through the early 1970s, he worked from an office at 10 East Mulberry Street in Baltimore (PAB Database; CARR-1643). During some or all of this time he practiced with partners under the firm name Hopkins, Pfeiffer & Associates. By the 1950s Hopkins was recognized by his professional peers as having made significant contributions to architecture. He was made a fellow of the AIA in 1951 (PAB Database).

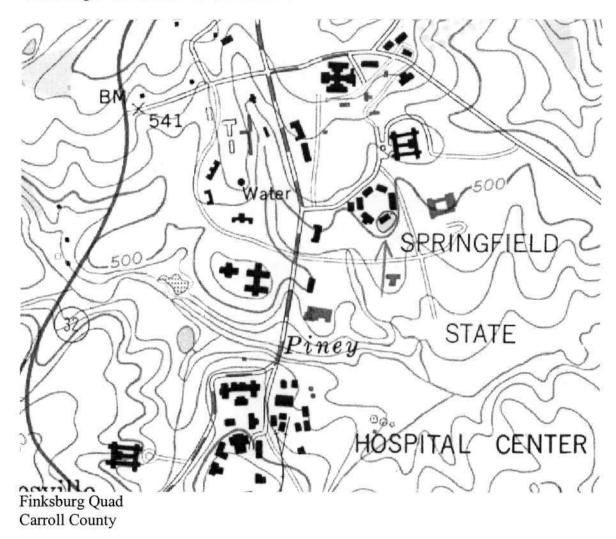

After receiving the commission to design the Clark Circle complex early in his career, Hopkins went on to design many buildings for the Maryland State government. He was responsible for buildings at the state's hospital centers at Spring Grove and Crownsville; the 1976 State Legislative Services Building in the capitol complex in Annapolis; and a number of buildings at the University of Maryland College Park, including the chapel and library ("Maryland U's New Arts and Science Building." The Washington Post, Times Herald. Sep. 21, 1963: A9.; Watson, Douglas. "Factions Fight Over Building; Will the Old Marble Hall Come Tumbling Down?" The Washington Post, Times Herald. Apr. 13, 1972: F1, F5.; CARR-1224; CARR-1229). Most or all of these buildings were designed in a simple Colonial Revival style similar to that used at Clark Circle.

The Clark Circle complex is eligible for listing in the National Register of Historic Places under Criterion A. As the first state facility built for the treatment of epileptic patients, the complex is representative of the significant expansion and specialization of Maryland public health care during the early twentieth century. Additional study of the property's history may determine whether or not the complex is associated with any individuals whose significant contributions to history can be identified and documented. None are known at this time.

The Clark Circle complex is also eligible for listing in the National Register under Criterion C. The "colony plan" form and consistent Colonial Revival style make the complex a unified entity typical of Maryland's early twentieth century mental health facilities. The grouping is also representative of the early work of significant Maryland architect Henry Powell Hopkins, whose career was characterized by large state institutional commissions and his use of a simple Colonial Revival style.

Clark Circle Complex – Springfield Hospital 7 Buildings: CARR-1224 to CARR-1230

CARR-1229

1928

Clark Circle Cottage #4

Public

Springfield Hospital Center

Sykesville

Located northeast of Cottage #2, Clark Circle Cottage #4 is a two story, flemish bond brick building that measures nine bays wide and three bays deep. The building forms a T with a projection of three bays wide and two bays deep off the south wall. Cottage #4 and Cottage #3 share many similar architectural elements.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

Facing north, Clark Circle Cottage #4 lies slightly northeast of Cottage #2. The cottage is constructed of flemish bond brick and rises two stories high. The main block of the building measures nine bays wide and three bays deep. The south wall exhibits a three bay wide and two bay deep projection with provides the building with a T shaped configuration. Two, one story attachments flank the T projection. The east side is an open porch while the west side is enclosed. Both have flat roofs and are supported by brick piers. The entire building rests on a brick water table and is capped by a hipped roof. Clark Circle Cottage #4 displays features of the Georgian Revival style of architecture and closely resembles Clark Circle Cottage #3 because they were constructed at the same time. For a more complete description of the cottage, please refer to the description of Clark Circle Cottage #3.

Prepare both a summary paragraph of significance and a general statement of history and support.

Clark Circle Cottage #4 is significant as a contributing member of the epileptic colony group. Built as residential housing, Cottage #4 was designed by Henry Powell Hopkins. The Northeastern Construction Company built the Cottage by November 1928 so that patients could be moved in before the winter months.

Henry Powell Hopkins designed the four original buildings of the epileptic group as his first commission at Springfield. Several years later when he designed Cottage #3 and Cottage #4, Hopkins had already executed several additional designs on the hospital campus. The architect went on to complete sixteen building designs and the addition to the Hubner Building during his professional involvement at Springfield State Hospital. In addition, the architect executed designs at other state hospitals which influenced the Springfield Board of Managers to identify Hopkins as somewhat of an expert in hospital design.
